- Responsive Web Design — freeCodeCamp
- Frontend Development
- Modern AI
- Networking Fundamentals
- Hackvento 2k26 — Hackathon

PROBLEM SOLVING

68+ problems solved

76% acceptance rate

Following Striver's A2Z DSA sheet · Java · LeetCode

I care about building software that actually works in production — not just toy projects that run fine on localhost and fall apart everywhere else. Currently co-founding **Demon Die**, maintaining **KDM-CLI** as code owner, and leading development on **Motiveio** — a full learning platform backed by a 13-table Postgres schema, row-level security, and server-side auth from the ground up. Shooting for a **security-focused internship by 2027**.

EXPERIENCE

Co-founder & Core Developer

June 2026 - Present

Demon Die — Open Source Org · [demondie.vercel.app](#)

- Built **Certifier**, a cross-repo badge platform that watches merged PRs via GitHub Webhooks and awards contributor credentials in real time
- Designed a **tiered badge system** (Front-End, Back-End, DevOps, Docs) so consistent open-source contributions turn into shareable, verifiable proof of work
- Wrote the points engine: labels on merged PRs map to scores, and accumulated points unlock org-wide badge tiers across all repos
- Shipped frontend improvements and documentation updates across several org repositories

Code Owner

May 2026 - Present

KDM-CLI — Kubernetes & Docker Monitor · [kdmcli.app](#)

- Took over an active open-source terminal monitoring tool for Docker containers and Kubernetes pods
- Built the full **CI/CD pipeline** with GitHub Actions — semantic versioning, tag alignment, and auto-generated changelogs on every release
- Created a terminal dashboard UI using Ink and Commander for real-time container and pod status, all inside the command line

FEATURED PROJECTS

Motiveio

2026

Next.js 16 TypeScript 6 Supabase Tailwind v4 Framer Motion Zod

A curated learning platform that pulls together **50+ courses from 30+ platforms** into 12 career roadmaps with 145+ steps and 226+ handpicked resources. Backed by a **13-table Postgres schema** with Row-Level Security, a repository pattern data layer, and server-first App Router architecture. Auth runs through four checkpoints — middleware, layout guard, action guard, and RLS — so nothing slips through. Includes a full admin panel with moderation tools. No signup required to browse.

GitDeep

2025

Next.js 15 TypeScript Recharts 12 AI Providers GitHub API

An AI-powered GitHub profile analyzer that gives honest, data-backed assessments. **Employer Mode** scores hirability and runs a SWOT breakdown — strengths, weaknesses, opportunities, threats. **Developer Mode** generates a mentorship plan. Catches things like inflated commit stats, buzzword-heavy READMEs, and AI-generated fluff in repos. **Nothing is stored** — everything runs session-only.

[gitdeep.vercel.app](#) ↗ [Source](#) ↗

GitIssue

2026

Next.js TypeScript GitHub Search API SWR

A cross-repo GitHub issue search tool with label tracking, language filters, and customizable views — entirely client-side, no backend needed. Built for contributors who want to scan "good first issues" across the whole GitHub ecosystem in one place.
